

SEP 27 1993

GREENACRES LANDFILL
Spokane County, Washington

The Situation

The Greenacres Landfill is a former township facility closed in 1971. A drinking water well immediately downstream of the Landfill has shown contamination with chlorinated organic solvents. This area is part of the Spokane Valley Aquifer which is a designated sole source drinking water source for 350,000 people in the region.

Work Done to Date

Water quality data has been collected over the past three years by the EPA. The trend has shown the groundwater adjacent to the site becoming more heavily contaminated.

What's Next?

Additional sampling is planned by EPA in the area with emphasis on the immediate vicinity of the Landfill.
